## St. Dormeir® Wool

People have been living with wool for thousands of years. It is a familiar and safe part of our environment.

Wool has amazing properties and is far superior to any man-made fiber. These protectors will keep your mattress and pillows cleaner, will keep you much more comfortable and will last longer than any synthetic.

All St. Dormeir® Wool comes from New Zealand, which is recognized as the world leader for the highest quality wools. St. Dormeir® Protectors are then quilted in Spain with a special chemical free 100% Cotton terry cover.

Invest in a good quality protector. It will add years to the life of your mattress and increase the quality of sleep.

## A Quality Protector

You cannot wash a mattress so it makes perfect sense to invest in a good quality washable protector. We all understand the benefits of buying the best mattress you can afford. A good one is expensive and caring for it will extend its life for many years.

Using a St. Dormeir protector gives you a protective layer between you and your mattress. The benefits of this natural protector are: washability, absorbency and naturally antimicrobial properties.

## Made in Canada

The St. Dormeir mattress protector is made by St. Geneve. We are a Canadian company that has specialized in making exceptional fine bed linens for decades. We are committed to supplying excellent quality natural fabric linens. We buy only the best fabrics and materials from long established, trusted mills in Europe to make our products in Canada.

## Questions & Answers

### Q. Is St. Dormeir® dust mite proof?

A. No, however wool is naturally inhospitable to dust mites as it does not maintain a level of humidity they need. The mites prefer to make their home in polyester and other manmade fibers.

### Q. What about wool allergies?

A. True wool allergies are rare. It is unclear what exactly causes the allergic reaction; the most common opinion is that it is simply a sensitivity to wool fibers. This calls for a simple solution of a barrier fabric between the sleeper's skin and the wool. St. Dormeir® wool protectors are encased in cotton. Considering the fact that a bedsheets goes over the protector as a second barrier, wool allergies are not likely to occur.

## Our Commitment

We are committed to helping you sleep better while impacting our home planet as little as possible.

We are committed to helping you sleep better, without any possibility of risk to your health in using our mattress and pillow protectors or to ourselves in making them.

We are committed to helping you sleep better and in our own small way, sending our children into a better future. We do this by not promoting products made of petro chemicals and filling up landfills with things that won't return to the earth.

## Guarantee

St. Dormeir® Protectors are guaranteed for three years against any defect in materials or workmanship, providing the care instructions have been carefully followed.

### St. Dormeir® Crib Protectors

A St. Dormeir® protector is perfect for a crib, for all the same reasons that they are perfect for your bed. The excellent washability of St. Dormeir® pads and the breathability of the wool makes the mattress feel far more comfortable for your baby.

Made by St. Geneve to fit mattresses up to 6" thick.

### St. Dormeir® Wool Mattress Protectors

St. Dormeir® Mattress Protectors are available in all standard mattress sizes and two skirt depths. Special sizes and shapes can be made to order.

All St. Dormeir® Mattress Protectors have a fully quilted top, made by quilting wool between two layers of pure, chemical free cotton. This cotton is woven in a jersey knit. This cotton is also used as the skirt that goes all around the sides of the protector, to fit completely over your mattress. It has an elastic band all around the bottom edge for the best fit.

### St. Dormeir® Pillow Protectors

The St. Dormeir® protectors thick quilting will keep your pillow clean and like new. Because of the natural breathability of the wool fill, it will always feel cool, fresh and cozy. The wool cover also gives a wonderful softness to the surface of your pillow.

St. Dormeir® protectors will make your pillows feel a bit firmer, due to the thickness of the wool fill. They are available in all standard sizes. Special sizes can be made.

Warmer in the winter, cooler in the summer, St. Dormeir® is more effective than any other protector.

Breathe Easy...*

St.Dormeir® Protectors

## St.Dormeir® Wool Protectors

They are perfect for use in both winter and summer conditions and are available in regular and hard to find sizes.

## Why Wool?

St. Dormeir® wool protectors come from renewable sources, are long-lasting, unlike polyester protectors and are naturally antimicrobial due to quick absorbency of moisture. Wool is simply the best!

## Why St. Dormeir®?

The New Zealand wool used in St. Dormeir® is milled by a new European process to make it completely machine washable and dryable. So you get all the wonderful benefits of wool with complete ease of care.

Wool can absorb up to 30% of its own weight in water vapor without feeling wet. Synthetics can absorb less than 5%. An average person can produce a pint of water as perspiration during the night.

Wool traps this moisture keeping the humidity surrounding you at a comfortably low level. During the day when the humidity level is low, the water evaporates leaving your bed dry and fresh for the next night. This is why St. Dormeir® wool is comfortable in the summer as well as in the winter.

## Wool is Resilient

Each wool fiber consists of a spiralling crimp that acts like a tiny spring. After compression or after washing, these tiny springs bounce back to their original shape, over and over again. Wool can bend back on itself 20,000 times without breaking. Synthetic fibers bend less than 100 times. This is why your St. Dormeir® protector will keep its puffiness and shape much longer than a polyester pad.

## Wool is Flame Retardant

Wool is very difficult to ignite and won't burn when the flame source is removed. Contrast this with polyester. Since it is made of hydrocarbons, it loves to burn.

## Why Not Polyester?

Polyester is made from elements in crude oil, just like plastics and gasoline. It slowly emits gas. When you consider that you spend about 8 hours every day in bed, polyester is not a good choice.
