

## Congratulations on buying an Ergonomic Hardwood Platform Bed.

Your Hardwood Bed Frame with Solid Slats comes in 4 boxes (2 slat boxes may be strapped together as one):

- 1) Head and Foot rails
- 2) Side and center rails
- 3) Solid Slats and legs for center rail.
- 4) Cross Support

### Lay out rails.

- Start by laying out Head and Foot rails in their approximate final location. Each is marked with "Head" or "Foot".
- Lay out the center with end marked "Head" toward the head.
- Lay out the side rails (slat ledge facing inward) with end marked "Head" toward the head.

### Attach Leg

The center rail leg attaches with the two threaded bolts using hex wrench found with legs. Hand tighten and then use long end of hex wrench to tighten slightly (no more than  $\frac{1}{4}$  turn.

### Setting Rails

Standing the Head Rail up with one hand, place hooks at end of Side Rail into plate in corner post of Head Rail. Do not press hard enough to fully seat, yet. Repeat with other Side Rail and then the center rail

Go to Foot Rail and repeat. After last corner, press hard on ends of both side rails to seat fasteners.

## Adjust Center Leg Leveler

The center leg has threaded feet. Turn until they are pressing against the floor.

## Roll out slats

Your hardwood slats are in two bundles. Pick the first and layout toward the head.

Insert hex bolt into ends of slats with the 8 pre-drilled holes. Middle slats will have another 2 holes for hex-bolts.
